1 Introduction

Beamer is an awesome way to make presentations with LaTeX, but its theme selection is surprisingly sparse. The stock themes share an aesthetic that can be a little cluttered, while the few distinctive custom themes available are often specialized for a particular corporate or institutional brand.

The goal of **NEO** is to provide a simple, modern Beamer theme suitable for anyone to use – it is based on the **metropolis** theme by **Matthias Vogelgesang** and **many other of contributors**. It tries to minimize noise and maximize space for content; the only visual flourish it offers is an (optional) progress bar added to each slide or to the section slides.

By default, **NEO** uses **Fira Sans**, a gorgeous typeface commissioned by Mozilla and designed by **Carrois**. For best results, you should use the Fira typeface distributed by this package and use X_YTeX to typeset your slides. However, **NEO** can also be used with other typefaces and T_EX build systems.

2 Getting Started

2.1 Installing from GitLab

If you want to use the cutting-edge development version of **NEO**, you can install it manually. Like any \LaTeX package, this involves four easy steps:

Download the source with a `git clone` of the [NEO repository](#) or as a [zip archive](#) of the latest development version.

Compile the style files by running `make sty` inside the downloaded directory. (Or run \LaTeX directly on `source/neotheme.ins`.)

Move the resulting `*.sty` files to the folder containing your presentation. To use **NEO** with many presentations, run `make install` or move the `*.sty` files to a folder in your \TeX path instead.

Use the theme for your presentation by declaring `\usetheme{neo}` in the preamble of your Beamer document.

NEO uses the Make build system to offer the following installation options for advanced users:

`make sty` builds the theme style files.

`make doc` builds this documentation manual.

`make demo` builds a demo presentation to test the features of **NEO**.

`make all` builds the theme and manual.

`make clean` removes the files generated by `make all`.

`make install` installs the theme into your local `texmf` folder.

`make uninstall` removes the theme from your local `texmf` folder.

2.2 A Minimal Example

The following code shows a minimal example of a Beamer presentation using **NEO**.

```
\documentclass{beamer}
```

```

\usetheme{neo}          % Use neo theme
\title{A minimal example}
\date{\today}
\author{Matthias Vogelgesang}
\institute{Centre for Modern Beamer Themes}
\begin{document}
  \maketitle
  \section{First Section}
  \begin{frame}{First Frame}
    Hello, world!
  \end{frame}
\end{document}

```

2.3 Dependencies

NEO depends on the beamer class and the following standard packages:

- tikz
- etoolbox
- ifxetex
- pgfopts
- calc
- ifluatex

For best results, we recommend installing the fonts **Fira Sans** and **Fira Mono** and compiling with **NEO** using Xe_{La}TeX or Lua_{La}TeX. These are optional dependencies; **NEO** is compatible with (e.g.) pdf_{La}TeX and will fall back to standard fonts if **Fira Sans** or **Fira Mono** is not installed.

The packaged name of **Fira Sans** is **Fira Sans OT** in some Linux distributions; this case is automatically handled by **NEO**.

2.4 Pandoc

To use this theme with **Pandoc**-based presentations, you can run the following command

```
$ pandoc -t beamer --latex-engine=xelatex -V theme:neo -o
  output.pdf input.md
```

3 Customization

3.1 Package options

The theme provides a number of options, which can be set using a key=value interface. The primary way to set options is to provide a comma-separated list of option-value pairs when loading **NEO** in the preamble:

```
\usetheme[option1=value1, option2=value2, ...]{neo}
```

Options can be changed at any time — even mid-presentation! — with the `\neoset` macro.

```
\neoset{option1=newvalue1, option2=newvalue2, ...}
```

The list of options is structured as shown in the following example.

option key	<i>list of possible values</i>	default
	A short description of the option.	

3.1.1 Main theme

titleformat	<i>regular, smallcaps, allsmallcaps, allcaps</i>	regular
Changes the format of titles, subtitles, section titles, frame titles, and the text on “standout” frames. The available options produce Regular, SMALLCAPS, ALLSMALLCAPS, or ALLCAPS titles. Please refer to Section 6.1 for known issues with these options.		

titleformat plain	<i>regular, smallcaps, allsmallcaps, allcaps</i>	regular
Changes the format of “standout” frames (see titleformat, above).		

3.1.2 Inner theme

sectionpage	<i>none, simple, progressbar</i>	progressbar
	Adds a slide at the start of each section (simple) with an optional thin progress bar below the section title (progressbar). The none option disables the section page.	
subsectionpage	<i>none, simple, progressbar</i>	none
	Optionally adds a slide at the start of each subsection. If enabled with the simple or progressbar options, the style of the section page will be updated to match the style of the subsection page. Note that section slides and subsection slides can appear consecutively if both are enabled; you may want to use this option together with sectionpage=none depending on the section structure of your presentation.	

3.1.3 Outer theme

numbering	<i>none, counter, fraction</i>	counter
	Controls whether the frame number at the bottom right of each slide is omitted (none), shown (counter) or displayed as a fraction of the total number of frames (fraction).	
progressbar	<i>none, head, frametitle, foot</i>	none
	Optionally adds a progress bar to the top of each frame (head), the bottom of each frame (foot), or directly below each frame title (frametitle).	

3.1.4 Color theme

block	<i>transparent, fill</i>	transparent
	Optionally adds a light grey background to block environments like theorem and example.	
background	<i>dark, light</i>	light
	Provides the option to have a dark background and light foreground instead of the reverse.	

3.1.5 Font theme

<code>titleformat title</code>	<i>regular, smallcaps, allsmallcaps, allcaps</i> regular
<code>titleformat subtitle</code>	Individually controls the format of titles, subtitles, section titles, and frame titles (see <code>titleformat</code> , above).
<code>titleformat section</code>	
<code>titleformat frame</code>	

3.2 Color Customization

The included **NEO** color theme is used by default, but its colors can be easily changed to suit your tastes. All of the theme's styles are defined in terms of three beamer colors:

- `normal` text (dark fg, light bg)
- `alerted` text (colored fg, should be visible against dark or light)
- `example` text (colored fg, should be visible against dark or light)

An easy way to customize the theme is to redefine these colors using

```
\setbeamercolor{ ... }{ fg= ... , bg= ... }
```

in your preamble. For greater customization, you can redefine any of the other stock beamer colors. In addition to the stock colors the theme defines a number of **NEO** specific colors, which can also be redefined to your liking.

```
\setbeamercolor{progress bar}{ ... }  
\setbeamercolor{title separator}{ ... }  
\setbeamercolor{progress bar in head/foot}{ ... }  
\setbeamercolor{progress bar in section page}{ ... }
```

3.3 Font Customization

The default font for **NEO** is Fira. This can be easily changed using the standard font selection commands of the `fontspec` package. So if you prefer, for example, the **Ubuntu** font family, just add the following two commands after loading the **NEO** theme.

```
\setsansfont{Ubuntu}
\setmonofont{Ubuntu Mono}
```

If you are expecting to present in a large room or with an underpowered projector, you may want to change the font to a heavier weight of Fira to maximize readability.

```
\setsansfont[BoldFont={Fira Sans SemiBold}]{Fira Sans Book}
```

3.3.1 Old style figures

The regular fontspec mechanism for changing glyph appearance applies also to this theme. If you want to have old style figures in the text but regular lined figures for math, you could add the following to your preamble:

```
\usefonttheme{professionalfonts} % required for mathspec
\usepackage{mathspec}
\setsansfont[BoldFont={Fira Sans},
             Numbers={OldStyle}]{Fira Sans Light}
\setmathsfon(Digits)[Numbers={Lining, Proportional}]{Fira
  Sans Light}
```

3.4 Commands

3.4.1 Standout frames

The **NEO** inner theme offers a custom frame format with large, centered text and an inverted background — perfect for focusing attention on single sentence or image. To use it, add the key `standout` to the frame:

```
\begin{frame}[standout]
  Thank you!
\end{frame}
```

4 pgfplots integration

NEO comes with a set of pre-defined pgfplots styles and a color theme based on Paul Tol's color scheme.

4.1 Styles

Pass the following style keys to the axis environment to get the appropriate effect:

`mlineplot` Plot regular line charts with reduced axis frames, less intrusive legend and subdued grid.

`mbarplot` Plot vertical bar charts in a similar way as `mlineplot` but reduce grid usage.

`horizontal mbarplot` Plot horizontal bar charts.

`disable thousands separator` Helper style to remove thousands separator.

4.2 Paul Tol colors

A good presentation uses colors that are distinct from each other as much as possible as well as from black and white, can be discerned item under different lighting and display environments and by color-blind viewers, while matching well together.

In a [technical note](#) for SRON, Paul Tol proposed a palette of colors satisfying these constraints. The sub-package `pgfplots-themetol` defines palettes for pgfplots charts based on Tol's work.

5 Tips & Tricks

5.1 Backup Slides

Speakers will often include extra slides at the end of their presentation to refer to during audience questions. One easy way to do this is to include the `appendixnumberbeamer` package in your preamble and call `\appendix` before your backup slides.

NEO will automatically turn off slide numbering and progress bars for slides in the appendix.

6 Known Issues

6.1 Title formats

Be aware that not every font supports small caps, so the `smallcaps` or `allsmallcaps` options may not work if you use a font other than Fira Sans. In particular, the Computer Modern sans-serif typeface, which is used when **NEO** is compiled with pdf \TeX , does not have a small-caps variant.

The title format options `allsmallcaps` and `allcaps` are quite nice from an aesthetic point of view, but their use of `\MakeLowercase` and `\MakeUppercase` can cause unexpected problems. For example:

- Some commands, like `\`, do not work inside `\MakeLowercase` and `\MakeUppercase`. (See [#125](#))
- Only alphabetic characters are affected by `\MakeLowercase`, so numerals and punctuation remain at full height. This can spoil some of the aesthetic benefits of `allsmallcaps`. (See [#33](#))
- `\MakeLowercase` and `\MakeUppercase` apply to math mode and `\scshape` does not. This can easily introduce mathematical errors that are hard to catch.
- It is impossible to typeset symbols which are encoded as uppercase letters in a different font. In particular, `\mathbb` and `\mathcal` letters will be replaced by other math glyphs. (See [#153](#))

The `allsmallcaps` and `allcaps` options are safe to use if your titles contain only alphabetic characters and do not require the expansion of any macros.

6.2 Interactions with other color themes

NEO can be used along with any other Beamer color theme, such as `crane` or `seahorse`. If you wish to do this, it is usually best to include the **NEO** sub-packages individually so the **NEO** color theme is never loaded. This will prevent conflicts between the **NEO** color theme and your preferred theme.

For example, overriding the color theme as follows may not work as expected because `\usetheme{neo}` loads the **NEO** color theme, which defines a relationship between the `frametitle` background and the primary palette of the theme. Since `seahorse` assumes a different relationship between its palettes, the result is a grey, rather than periwinkle, `frametitle` background.

```
\usetheme{neo}  
\usecolortheme{seahorse}
```

The correct colors are chosen if the **NEO** outer, inner, and font themes are loaded separately:

```
\useoutertheme{neo}  
\useinnertheme{neo}  
\usefonttheme{neo}  
\usecolortheme{seahorse}    % or your preferred color theme
```

Please note that **NEO** may not use all the colors defined in your favourite Beamer color theme. In particular, **NEO** does not set a background color for the title; this will cause issues when using color themes like `whale` which set a white foreground for the title.

6.3 Notes on second screen

If you use the `[show notes on second screen]` option built in to Beamer and compile with \LaTeX , text on slides following the first section slide may be

rendered in white instead of the regular colour. This is due to a [bug](#) in Beamer or Xe_{La}TeX itself. You can work around it either by compiling with Lua_{TeX} or by adding the following code to your preamble to reset the text color on each slide.

```
\makeatletter
\def\beamer@framenotesbegin{% at beginning of slide
    \usebeamercolor[fg]{normal text}
    \gdef\beamer@noteitems{}%
    \gdef\beamer@notes{}%
}
\makeatother
```

6.4 Standout frames with labels

Because the standout frame option creates a group to restrict the colour change to a single slide, labels defined after calling standout will stay local to the group. In other words, the following may result in a “label undefined” error.

```
\begin{frame}[standout, label=conclusion]{Conclusion}
    Awesome slide
\end{frame}
```

To fix this problem, change the order of the keys in the frame.

```
\begin{frame}[label=conclusion, standout]{Conclusion}
    Awesome slide
\end{frame}
```

This error can be unwittingly triggered if you export your slides from Emacs Org mode, which automatically adds labels after frame options. Alex Branham [offers](#) the following solution for Org mode users, using `org-set-property`.

```
* Start of a frame
:PROPERTIES:
:BEAMER_opt: label=conclusion,standout
:END:
```

6.5 Standout frames with Pandoc

With Pandoc versions prior 1.17.2 it was not possible to create standout frames because Pandoc only supported a specific list of frame attributes thus ignoring additional attributes such as `{.standout}`.

7 License

NEO is licensed under a [Creative Commons Attribution-ShareAlike 4.0 International License](#). This means that if you change the theme and re-distribute it, you must retain the copyright notice header and license it under the same CC-BY-SA license. This does not affect any presentations that you create with the theme.

8 Implementation

8.1 **NEO** parent theme

The primary job of this package is to load the component sub-packages of the **NEO** theme and route the theme options accordingly. It also provides some custom commands and environments for the user.

8.1.1 Package dependencies

```
1 \RequirePackage{etoolbox}
2 \RequirePackage{pgfopts}
```

8.1.2 Options

Most options are passed off to the component sub-packages.

```
3 \pgfkeys{/neo/.cd,
4   .search also={
5     /neo/inner,
6     /neo/outer,
```

```

7    /neo/color,
8    /neo/font,
9  }
10 }

```

`titleformat plain` Controls the formatting of the text on standout “plain” frames.

```

11 \pgfkeys{
12   /neo/titleformat plain/.cd,
13   .is choice,
14   regular/.code={%
15     \let\neo@plaintitleformat\@empty%
16     \setbeamerfont{standout}{shape=\normalfont}%
17   },
18   smallcaps/.code={%
19     \let\neo@plaintitleformat\@empty%
20     \setbeamerfont{standout}{shape=\scshape}%
21   },
22   allsmallcaps/.code={%
23     \let\neo@plaintitleformat\MakeLowercase%
24     \setbeamerfont{standout}{shape=\scshape}%
25     \PackageWarning{beamerthemeneo}{%
26       Be aware that titleformat plain=allsmallcaps can lead to problems%
27     }
28   },
29   allcaps/.code={%
30     \let\neo@plaintitleformat\MakeUppercase%
31     \setbeamerfont{standout}{shape=\normalfont}%
32     \PackageWarning{beamerthemeneo}{%
33       Be aware that titleformat plain=allcaps can lead to problems%
34     }
35   },
36 }

```

`titleformat` Sets a standard format for titles, subtitles, section titles, frame titles, and the text on standout “plain” frames.

```

37 \pgfkeys{
38   /neo/titleformat/.code=\pgfkeysalso{
39     font/titleformat title=#1,
40     font/titleformat subtitle=#1,

```

```

41     font/titleformat section=#1,
42     font/titleformat frame=#1,
43     titleformat plain=#1,
44   }
45 }

```

Shortcut option names as aliases to the corresponding key=value options.

```

46 \pgfkeys{/neo/.cd,
47   noslidenumbers/.code=\pgfkeysalso{outer/numbering=none},
48   usetotalslideindicator/.code=\pgfkeysalso{outer/numbering=fraction},
49   nosectionslide/.code=\pgfkeysalso{inner/sectionpage=none},
50   darkcolors/.code=\pgfkeysalso{color/background=dark},
51   blockbg/.code=\pgfkeysalso{color/block=fill, inner/block=fill},
52   light/.code=\pgfkeysalso{font/style=light},
53   book/.code=\pgfkeysalso{font/style=book},
54   regular/.code=\pgfkeysalso{font/style=regular},
55 }

```

Set default values for options.

```

56 \newcommand{\neo@setdefaults}{
57   \pgfkeys{/neo/.cd,
58     titleformat plain=regular,
59   }
60 }

```

To avoid generating externalized figures of the progressbar we have to disable them with “tikzexternalenable” and “tikzexternaldisable”. However, if the “external” libray is not loaded we would get undefined control sequence problems, hence we define them as no-ops if they are not defined yet.

```

61 \providecommand{\tikzexternalenable}{}
62 \providecommand{\tikzexternaldisable}{}

```

8.1.3 Component sub-packages

Having processed the options, we can now load the component sub-packages of the theme.

```

63 \useinnertheme{neo}

```

```

64 \useoutertheme{neo}
65 \usecolortheme{neo}
66 \usefonttheme{neo}

```

The `tol` theme for `pgfplots` is only loaded if `pgfplots` is used, `pdfpcnotes` always

```

67 \AtEndPreamble{%
68   \RequirePackage{pdfpcnotes}
69   \@ifpackageloaded{pgfplots}{%
70     \RequirePackage{pgfplotsthemetol}
71   }{}
72 }

```

8.1.4 Custom commands

The parent theme defines custom commands as their proper usage may depend on multiple sub-packages.

`\neoset` Allows the user to change options midway through a presentation.

```

73 \newcommand{\neoset}[1]{\pgfkeys{/neo/.cd,#1}}

```

`\plain` Creates a plain frame with dark background, suitable for displaying images or a few words. The format of the text can be set with the `titleformat plain` option.

```

74 \def\neo@plaintitleformat#1{#1}
75 \newcommand{\plain}[2][{}]{%
76   \PackageWarning{beamerthemeneo}{%
77     The syntax ‘\plain’ may be deprecated in a future version of neo.
78     Please use a frame with [standout] instead.
79   }
80   \begin{frame}[standout]{#1}
81     \neo@plaintitleformat{#2}
82   \end{frame}
83 }

```

`\mreducelistspacing`

```

84 \newcommand{\mreducelistspacing}{\vspace{-\topsep}}

```

8.1.5 Process package options

```
85 \neo@setdefaults
86 \ProcessPgfOptions{/neo}
```

8.2 NEO inner theme

A beamer inner theme dictates the style of the frame elements traditionally set in the “body” of each slide. These include:

- title, part, and section pages;
- itemize, enumerate, and description environments;
- block environments including theorems and proofs;
- figures and tables; and
- footnotes and plain text.

8.2.1 Package dependencies

```
87 \RequirePackage{etoolbox}
88 \RequirePackage{keyval}
89 \RequirePackage{calc}
90 \RequirePackage{pgfopts}
91 \RequirePackage{tikz}
```

8.2.2 Options

`sectionpage` Optionally add a slide marking the beginning of each section.

```
92 \pgfkeys{
93   /neo/inner/sectionpage/.cd,
94   .is choice,
95   none/.code=\neo@disablesectionpage,
96   simple/.code={\neo@enablesectionpage
97                 \setbeamertemplate{section page}[simple]},
98   progressbar/.code={\neo@enablesectionpage
99                      \setbeamertemplate{section page}[progressbar]},
100 }
```

`subsectionpage` Optionally add a slide marking the beginning of each subsection.

```
101 \pgfkeys{
```

```

102 /neo/inner/subsectionpage/.cd,
103   .is choice,
104   none/.code=\neo@disablesubsectionpage,
105   simple/.code={\neo@enablesubsectionpage
106                 \setbeamertemplate{section page}[simple]},
107   progressbar/.code={\neo@enablesubsectionpage
108                     \setbeamertemplate{section page}[progressbar]},
109 }

```

`\neo@inner@setdefaults` Set default values for inner theme options.

```

110 \newcommand{\neo@inner@setdefaults}{
111   \pgfkeys{/neo/inner/.cd,
112     sectionpage=progressbar,
113     subsectionpage=none
114   }
115 }

```

8.2.3 Title page

`title page` Template for the title page. Each element is only typset if it is defined by the user. If `\subtitle` is empty, for example, it won't leave a blank space on the title slide.

```

116 \setbeamertemplate{title page}{
117   \begin{minipage}[b][0.95\paperheight]{\textwidth}
118     \vfill%
119     \ifx\inserttitle\@empty\else\usebeamertemplate*{title}\fi
120     \ifx\insertsubtitle\@empty\else\usebeamertemplate*{subtitle}\fi
121     \usebeamertemplate*{title separator}

```

Beamer's definition of `\insertauthor` is always nonempty, so we have to test another macro initialized by `\author{...}` to see if the user has defined an author. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```

122   \ifx\insertdate\@empty\else\usebeamertemplate*{date}\fi
123   \ifx\beamer@shortauthor\@empty\else\usebeamertemplate*{author}\fi
124   \ifx\insertinstitute\@empty\else\usebeamertemplate*{institute}\fi
125   \vfill

```

```

126   \begin{minipage}[b][0.25\paperheight][t]{\textwidth}
127     \ifx\inserttitlegraphic\@empty\else\usebeamertemplate*{title graphic}\fi
128   \end{minipage}
129 \end{minipage}
130 }

```

Normal people should use `\maketitle` or `\titlepage` instead of using the title page beamer template directly. Beamer already defines these macros, but we patch them here to make the title page [plain] by default, remove `@thanks`, and ensure the title frame number doesn't count. In addition, `\maketitle` used outside of a frame will load a predefined background image, which can be changed using the optional argument: `\maketitle{extern}` for `images/titlepage-extern.pdf`

`\maketitle` Inserts the title frame, or causes the current frame to use the title page
`\titlepage` template.

```

131 \renewcommand{\maketitle}[1][extern]{%
132   \ifbeamer@inframe
133     \titlepage
134   \else
135     {
136       \usebackgroundtemplate{\includegraphics[width=\paperwidth]{images/titlepage-#
137       \frame[plain,noframenumbering]{
138         \neo@colors@dark
139         \setbeamercolor{title separator}{
140         fg=black!20,
141         bg=normal text.fg
142       }
143       \titlepage
144     }
145   }
146 \fi
147 }

268   \end{tikzpicture}%
269   \tikzexternalenable%
270 }

```

The above code assumes that `\insertframenum` is less than or equal to `\inserttotalframenum`. However, this is not true on the first compile; in the absence of an `.aux` file, `\inserttotalframenum` defaults to 1. This behaviour could cause fatal errors for long presentations, as `\neo@progressonsectionpage` would exceed TeX's maximum length (16383.99999pt, roughly 5.75 metres or 18.9 feet). To avoid this, we increase the default value for `\inserttotalframenum`; presentations with over 4000 slides will still break on first compile, but users in that situation likely have deeper problems

to solve.

```
271 \def\inserttotalframenumbers{100}
```

8.2.5 Block environments

`block` The three different block environments differ only in their colours. Rather
`block alerted` than repeat the essentially the same template three times, we use the auxil-
`block example` iary macro `\neo@block` to define all three templates.

```
272 \newlength{\neo@blocksep}  
273 \newlength{\neo@blockadjust}  
274 \setlength{\neo@blocksep}{0.75ex}  
275 \setlength{\neo@blockadjust}{0.25ex}  
276 \providecommand{\neo@strut}{%  
277   \vphantom{ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz}}%  
278 }  
279 \newcommand{\neo@block}[1]{  
280   \par\vskip\medskipamount%  
281   \setlength{\parskip}{0pt}
```

If a background color is defined for the block title or body, we need to add a little bit of padding to the corresponding box. Ideally, this would be accomplished by setting `colsep=0.75ex`, which is intended to add “color separation space” only when the box has a colored background. Unfortunately, `colsep` also adds this separation if the background color is inherited, even if the inherited color is actually empty. (The technical reason for this boils down to the fact that the `\ifx` directive does not expand macros.)

To achieve the correct spacing for `alertblocks` and `exampleblocks` as well as for normal blocks, we have to begin the `beamercolorbox` differently based on whether `block title` has an empty background.

If the `block title` background is empty, or the user has explicitly removed the background from (e.g.) `block title alerted`, we just need to set a `rightskip` for a nice ragged-right block title.

```
282 \ifbeamercoloreempty[bg]{block title#1}{%  
283   \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}}{%  
284   \ifbeamercoloreempty[bg]{block title}{%
```

```

285 \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}%
286 }%
287 % \end{macrocode}
288 %
289 % Otherwise, if the |block title| has a background, we set the padding based
290 % on |\neo@blockskip|. However, we have to visually compensate for
291 % the |\neo@strut| added to the block title (see below) by
292 % subtracting |\neo@blockadjust| from the top and bottom padding.
293 %
294 % \begin{macrocode}
295 {%
296 \begin{beamercolorbox}[
297     sep=\dimexpr\neo@blocksep-\neo@blockadjust\relax,
298     leftskip=\neo@blockadjust,
299     rightskip=\dimexpr\neo@blockadjust plus 4em\relax
300 ]{block title#1}%
301 }}%
302 % \end{macrocode}
303 %
304 % We can now set the contents of the |block title|. The zero-width but
305 % positive-height box |\neo@strut| ensures that the block title box
306 % has a consistent height, even if it lacks punctuation, ascenders, or
307 % descenders.
308 %
309 % \begin{macrocode}
310 \usebeamerfont*{block title#1}%
311 \neo@strut%
312 \insertblocktitle%
313 \neo@strut%
314 \end{beamercolorbox}%
315 % \end{macrocode}
316 %
317 % Next, we typeset the |block body|. This the code is similar to, but simpler
318 % than, the |block title| code since we don't need to adjust for any struts.
319 %
320 % \begin{macrocode}
321 \nointerlineskip%
322 \ifbeamercolorempy[bg]{block body#1}{%
323 \begin{beamercolorbox}[vmode]{block body#1}}{
324 \ifbeamercolorempy[bg]{block body}{%

```

```

325   \begin{beamercolorbox}[vmode]{block body#1}%
326   }{%
327   \begin{beamercolorbox}[sep=\neo@blocksep, vmode]{block body#1}%
328   \vspace{-\neo@parskip}
329   }}%
330   \usebeamerfont{block body#1}%
331   \setlength{\parskip}{\neo@parskip}%
332 }

```

This concludes the auxiliary macro `\neo@block`. Finally, we define the block beamer templates using this macro.

```

333 \setbeamertemplate{block begin}{\neo@block{}}
334 \setbeamertemplate{block alerted begin}{\neo@block{ alerted}}
335 \setbeamertemplate{block example begin}{\neo@block{ example}}
336 \setbeamertemplate{block end}{\end{beamercolorbox}\vspace*{0.2ex}}
337 \setbeamertemplate{block alerted end}{\end{beamercolorbox}\vspace*{0.2ex}}
338 \setbeamertemplate{block example end}{\end{beamercolorbox}\vspace*{0.2ex}}

```

8.2.6 Lists and floats

```

339 \setbeamertemplate{itemize items}{\raise1pt\hbox{\vrule width 0.8ex height 0.8ex}}
340 \setbeamertemplate{itemize subitem}{\raise1pt\hbox{\vrule width 0.5ex height 0.5ex}}
341 \setbeamertemplate{itemize subsubitem}{\raise.5ex\hbox{\vrule width 1ex height 0.2ex}}
342 \defbeamertemplate{description item}{align left}{\insertdescriptionitem\hfill}
343 \setbeamertemplate{caption label separator}{: }
344 \setbeamertemplate{caption}[numbered]

```

8.2.7 Footnotes

```

345 \setbeamertemplate{footnote}{%
346   \parindent 0em\noindent%
347   \raggedright
348   \usebeamercolor{footnote}\hbox to 0.8em{\hfil\insertfootnotemark}\insertfootnotetext
349 }

```

8.2.8 Text and spacing settings

```

350 \newlength{\neo@parskip}
351 \setlength{\neo@parskip}{0.5em}
352 \setlength{\parskip}{\neo@parskip}

```

```
353 \linespread{1.15}
```

By default, Beamer frames offer the `c` option to *almost* vertically center the text, but the placement is a little too high. To fix this, we redefine the `c` option to equalize `\beamer@frametopskip` and `\beamer@framebottomskip`. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```
354 \define@key{beamerframe}{c}[true]{% centered
355   \beamer@frametopskip=0pt plus 1fill\relax%
356   \beamer@framebottomskip=0pt plus 1fill\relax%
357   \beamer@frametopskipautobreak=0pt plus .4\paperheight\relax%
358   \beamer@framebottomskipautobreak=0pt plus .6\paperheight\relax%
359   \def\beamer@initfirstlineunskip{}}%
360 }
```

8.2.9 Standout frames

NEO offers a custom frame format with large, centered text and an inverted background. To use it, add the key `standout` to the frame: `\begin{frame}[standout] ... \end{frame}`

`standout` Optional arguments to Beamer's frames are implemented using `\define@key` from the `keyval` package, which will execute code when the defined option is called. For the `standout` option, we begin a group, change the colors and fonts, and set a alignment.

```
361 \providebool{neo@standout}
362 \define@key{beamerframe}{standout}[true]{%
363   \booltrue{neo@standout}
364   \begingroup
365     \setkeys{beamerframe}{c}
366     \ifbeamercoloreempty[bg]{palette primary}{
367       \setbeamercolor{background canvas}{
368         use=palette primary,
369         bg=-palette primary.fg
370       }
371     }{
372       \setbeamercolor{background canvas}{
373         use=palette primary,
374         bg=palette primary.bg
375       }
376     }
377   }
378 }
```

```

376     }
377     \setbeamercolor{local structure}{
378         fg=palette primary.fg
379     }
380     \centering
381     \usebeamercolor[fg]{palette primary}
382     \usebeamerfont{standout}
383 }

```

Then we just have to close the group after the standout slide is finished in order to restore the colours and fonts for the rest of the presentation.

Unfortunately, we cannot use or this (see <http://tex.stackexchange.com/questions/226319/>). Instead, we add the `\endgroup` to `\beamer@reseteecodes`, which is run exactly once at the end of each slide.

```

384 \apptocmd{\beamer@reseteecodes}{%
385     \ifbool{neo@standout}{
386         \endgroup
387         \boolfalse{neo@standout}
388     }{}
389 }{}{}

```

8.2.10 Process package options

```

390 \neo@inner@setdefaults
391 \ProcessPgfPackageOptions{/neo/inner}

```

8.3 NEO outer theme

A beamer outer theme dictates the style of the frame elements traditionally set outside the body of each slide: the head, footline, and frame title.

8.3.1 Package dependencies

```

392 \RequirePackage{etoolbox}
393 \RequirePackage{calc}
394 \RequirePackage{pgfopts}

```

8.3.2 Options

icon Adds an icon to the frametitle on each slide.

```
395 \pgfkeys{
396   /neo/outer/frametitle icon/.cd,
397   .is choice,
398   none/.code=\setbeamertemplate{frametitle icon}[none],
399   i4/.code=\setbeamertemplate{frametitle icon}[i4],
400   fau/.code=\setbeamertemplate{frametitle icon}[fau],
401 }
```

numbering Adds slide numbers to the bottom right of each slide.

```
402 \pgfkeys{
403   /neo/outer/numbering/.cd,
404   .is choice,
405   none/.code=\setbeamertemplate{frame numbering}[none],
406   counter/.code=\setbeamertemplate{frame numbering}[counter],
407   fraction/.code=\setbeamertemplate{frame numbering}[fraction],
408 }
```

progressbar Adds a progress bar to the top, bottom, or frametitle of each slide.

```
409 \pgfkeys{
410   /neo/outer/progressbar/.cd,
411   .is choice,
412   none/.code={%
413     \setbeamertemplate{headline}[plain]
414     \setbeamertemplate{frametitle}[plain]
415     \setbeamertemplate{footline}[plain]
416   },
417   head/.code={\pgfkeys{/neo/outer/progressbar=none}
418     \addtobeamertemplate{headline}{}{}%
419     \usebeamertemplate*{progress bar in head/foot}
420   },
421   },
422   frametitle/.code={\pgfkeys{/neo/outer/progressbar=none}
423     \addtobeamertemplate{frametitle}{}{}%
424     \usebeamertemplate*{progress bar in head/foot}
425   }
```

```

426     },
427     foot/.code={\pgfkeys{/neo/outer/progressbar=none}
428       \addtobeamertemplate{footline}{}{}%
429       \usebeamertemplate*{progress bar in head/foot}%
430     }
431   },
432 }

```

`\neo@outer@setdefaults` Sets default values for outer theme options.

```

433 \newcommand{\neo@outer@setdefaults}{
434   \pgfkeys{/neo/outer/.cd,
435     frametitle icon=none,
436     numbering=counter,
437     progressbar=none,
438   }
439 }

```

8.3.3 Head and footline

All good beamer presentations should already remove the navigation symbols, but **NEO** removes them automatically (just in case).

```

440 \setbeamertemplate{navigation symbols}{}

```

`frametitle icon` Templates for the icon on the right of the frame title.

```

441 \defbeamertemplate{frametitle icon}{none}{}
442 \defbeamertemplate{frametitle icon}{i4}{ \hfill\raisebox{-.25\height}{\includegraphics[width=1cm]{i4.png}} }
443 \defbeamertemplate{frametitle icon}{fau}{ \hfill\raisebox{-.25\height}{\includegraphics[width=1cm]{fau.png}} }

```

`frame numbering` Templates for the frame number. Can be omitted, shown or displayed as a fraction of the total frames.

```

444 \defbeamertemplate{frame footer}{none}{}
445 \defbeamertemplate{frame footer}{custom}[1]{ #1 }

446 \defbeamertemplate{frame numbering}{none}{}
447 \defbeamertemplate{frame numbering}{counter}{\insertframenumbers}
448 \defbeamertemplate{frame numbering}{fraction}{
449   \insertframenumbers/\inserttotalframenumbers

```

450 }

headline Templates for the head- and footline at the top and bottom of each frame.

footline

```
451 \defbeamertemplate{headline}{plain}{}
452 \defbeamertemplate{footline}{plain}{%
453   \begin{beamercolorbox}[wd=\textwidth, sep=3ex]{footline}%
454     \usebeamerfont{page number in head/foot}%
455     \usebeamertemplate*{frame footer}
456     \hfill%
457     \usebeamertemplate*{frame numbering}
458   \end{beamercolorbox}%
459 }
```

8.3.4 Frametitle

frametitle Templates for the frame title, which is optionally underlined with a progress bar.

```
460 \newlength{\neo@frametitle@padding}
461 \setlength{\neo@frametitle@padding}{2.2ex}
462 \newcommand{\neo@frametitlestrut@start}{
463   \rule{0pt}{\neo@frametitle@padding +%
464     \totalheightof{%
465       \ifcsdef{neo@frametitleformat}{\neo@frametitleformat X}{X}%
466     }%
467   }%
468 }
469 \newcommand{\neo@frametitlestrut@end}{
470   \rule[-\neo@frametitle@padding]{0pt}{\neo@frametitle@padding}
471 }
472 \defbeamertemplate{frametitle}{plain}{%
473   \nointerlineskip%
474   \begin{beamercolorbox}[%
475     wd=\paperwidth,%
476     sep=0pt,%
477     leftskip=\neo@frametitle@padding,%
478     rightskip=\neo@frametitle@padding,%
479   ]{frametitle}%
480   \neo@frametitlestrut@start%
```

```

481 \insertframetitle%
482 \usebeamertemplate*{frametitle icon}%
483 \nolinebreak%
484 \neo@frametitlestrut@end%
485 \end{beamercolorbox}%
486 }
487 \setbeamertemplate{frametitle continuation}{%
488 \usebeamerfont{frametitle}
489 \romannumeral \insertcontinuationcount
490 }

```

progress bar in head/foot Template for the progress bar optionally displayed below the frame title on each page. Much of this code is duplicated in the inner theme's template progress bar in section page.

```

491 \newlength{\neo@progressinheadfoot}
492 \newlength{\neo@progressinheadfoot@linewidth}
493 \setlength{\neo@progressinheadfoot@linewidth}{0.8pt}
494 \setbeamertemplate{progress bar in head/foot}{
495   \nointerlineskip
496   \setlength{\neo@progressinheadfoot}{%
497     \paperwidth * \ratio{\insertframenum pt}{\inserttotalframenum pt}}%
498   }%
499   \begin{beamercolorbox}[wd=\paperwidth]{progress bar in head/foot}
500     \tikzexternaldisable%

750     Be aware that titleformat frame=allcaps can lead to problems%
751   }
752 },
753 }

```

`titleformat aliases` Allows `titleformat title` et al. to be used in the `\usetheme` declaration, where \TeX automatically removes all spaces.

```

754 \pgfkeys{
755   /neo/font/.cd,
756   titleformattitle/.code=\pgfkeysalso{titleformat title=#1},
757   titleformatsubtitle/.code=\pgfkeysalso{titleformat subtitle=#1},
758   titleformatsection/.code=\pgfkeysalso{titleformat section=#1},
759   titleformatframe/.code=\pgfkeysalso{titleformat frame=#1},
760 }

```

`\neo@font@setdefaults` Sets default values for font theme options.

```

761 \newcommand{\neo@font@setdefaults}{
762   \pgfkeys{/neo/font/.cd,
763     style=book,
764     titleformat title=regular,
765     titleformat subtitle=regular,
766     titleformat section=regular,
767     titleformat frame=regular,
768   }
769 }

```

We first define hooks to change the case format of the titles.

```

770 \def\neo@titleformat#1{#1}
771 \def\neo@subtitleformat#1{#1}
772 \def\neo@sectiontitleformat#1{#1}
773 \def\neo@frametitleformat#1{#1}

```

To make the uppercase and lowercase macros work in the title, subtitle, etc., we have to patch the appropriate beamer commands that set their values. This

solution was suggested by Enrico Gregorio in an answer to [this StackExchange question](#).

```
774 \patchcmd{\beamer@title}%

890
891 \definecolor{nBlack}{HTML}{011F32}
892 \definecolor{nWhite}{RGB}{250,250,250}

```

8.5.4 Alias colors

Support the colors provided by the old i4 beamer theme.

```

893 \colorlet{i4red}{nDarkRed}
894 \colorlet{i4green}{nDarkGreen}
895 \colorlet{i4blue}{nDarkBlue}
896 \colorlet{i4yellow}{nDarkYellow}
897 \colorlet{i4grey}{nDarkGrey}
898 \definecolor{darkred}{rgb}{0.8,0,0}

```

```
899 \colorlet{beamergreen}{green!50!black}
```

8.5.5 Base styles

All colors in **NEO** are derived from the definitions of normal text, alerted text, and example text.

```
900 \newcommand{\neo@colors@dark}{
901   \setbeamercolor{normal text}{%
902     fg=nWhite,
903     bg=nBlack
904   }
905   \setbeamercolor{normal item}{%
906     fg=nWhite,
907     bg=nDarkBlue
908   }
909   \usebeamercolor[fg]{normal text}
910 }
911 \newcommand{\neo@colors@light}{
912   \setbeamercolor{normal text}{%
913     fg=nBlack,
914     bg=nWhite
915   }
916   \setbeamercolor{normal item}{%
917     fg=nDarkBlue,
918     bg=nWhite
919   }
920 }
921 \setbeamercolor{alerted text}{%
922   fg=nDarkRed
923 }
924 \setbeamercolor{example text}{%
925   fg=nDarkYellow
926 }
```

8.5.6 Derived colors

The titles and structural elements (e.g. itemize bullets) are set in the same color as normal text and normal item. This would ideally be done by setting normal text and normal item as a parent style, which we do to set titlelike, but this doesn't work for structure as its foreground is set explicitly in beamercolorthemedefault.sty.

```
927 \setbeamercolor{titlelike}{use=normal text, parent=normal text}
928 \setbeamercolor{author}{use=normal text, parent=normal text}
929 \setbeamercolor{date}{use=normal text, parent=normal text}
930 \setbeamercolor{institute}{use=normal text, parent=normal text}
931 \setbeamercolor{structure}{use=normal item, fg=normal item.fg}
```

The “primary” palette should be used for the most important navigational elements, and possibly of other elements. **NEO** uses it for frame titles and slides.

```
932 \setbeamercolor{palette primary}{%
933   use=normal text,
934   fg=normal text.bg,
935   bg=nDarkBlue
936 }
937 \setbeamercolor{frametitle}{%
938   use=palette primary,
939   parent=palette primary
940 }
```

The **NEO** inner or outer themes optionally display progress bars in various locations. Their color is set by progress bar but the two different kinds can be customized separately. The horizontal rule on the title page is also set based on the progress bar color and can be customized with title separator.

```
941 \setbeamercolor{progress bar}{%
942   use=normal text,
943   fg=nDarkBlue,
944   bg=nLightBlue
945 }
946 \setbeamercolor{title separator}{%
947   use=progress bar,
948   parent=progress bar
949 }
```

```

950 \setbeamercolor{progress bar in head/foot}{%
951   use=normal text.fg,
952   fg=nBlack,
953   parent=progress bar
954 }
955 \setbeamercolor{progress bar in section page}{
956   use=progress bar,
957   parent=progress bar
958 }

```

Block environments such as theorem and example have no background color by default. The option `block=fill` sets a background color based on the background and foreground of normal text. The option `block=transparent` reverts the block environments to an empty background, which can be useful if changing colors mid-presentation.

```

959 \newcommand{\neo@block@transparent}{
960   \setbeamercolor{block title}{%
961     use=normal text,
962     fg=nDarkBlue,
963     bg=
964   }
965   \setbeamercolor{block title alerted}{%
966     use={block title, alerted text},
967     bg=block title.bg,
968     fg=alerted text.fg
969   }
970   \setbeamercolor{block title example}{%
971     use={block title, example text},
972     bg=block title.bg,
973     fg=example text.fg
974   }
975   \setbeamercolor{block body}{
976     bg=
977   }
978   \setbeamercolor{block body alerted}{
979     use=block body,
980     parent=block body
981   }
982   \setbeamercolor{block body example}{

```

```

983     use=block body,
984     parent=block body
985 }
986 }
987 \newcommand{\neo@block@fill}{
988   \setbeamercolor{block title}{%
989     use=normal text,
990     fg=nDarkBlue,
991     bg=nGrey
992   }
993   \setbeamercolor{block title alerted}{%
994     use={block title, alerted text},
995     bg=alerted text.fg,
996     fg=alerted text.bg
997   }
998   \setbeamercolor{block title example}{%
999     use={block title, example text},
1000     bg=example text.fg,
1001     fg=example text.bg
1002   }
1003   \setbeamercolor{block body}{
1004     use={block title, normal text},
1005     bg=nLightGrey
1006   }
1007   \setbeamercolor{block body alerted}{
1008     use=block body,
1009     parent=block body,
1010     bg=nRed!50,
1011   }
1012   \setbeamercolor{block body example}{
1013     use=block body,
1014     parent=block body,
1015     bg=nYellow!50
1016   }
1017 }
1018

```

Footnotes

```

1019 \setbeamercolor{footnote}{fg=normal text.fg!90}
1020 \setbeamercolor{footnote mark}{fg=.%}

```

We also reset the bibliography colors in order to pick up the surrounding colors at the time of use. This prevents us having to set the correct color in normal and standout mode.

```
1021 \setbeamercolor{bibliography entry author}{fg=, bg=}
1022 \setbeamercolor{bibliography entry title}{fg=, bg=}
1023 \setbeamercolor{bibliography entry location}{fg=, bg=}
1024 \setbeamercolor{bibliography entry note}{fg=, bg=}
```

8.5.7 Process package options

```
1025 \neo@color@setdefaults
1026 \ProcessPgfPackageOptions{/neo/color}
1027 \mode<all>
```

8.6 Tol pgfplots theme

Paul Tol’s 12-color palette¹ is as follows:

```
1028 \definecolor{TolDarkPurple}{HTML}{332288}
1029 \definecolor{TolDarkBlue}{HTML}{6699CC}
1030 \definecolor{TolLightBlue}{HTML}{88CCEE}
1031 \definecolor{TolLightGreen}{HTML}{44AA99}
1032 \definecolor{TolDarkGreen}{HTML}{117733}
1033 \definecolor{TolDarkBrown}{HTML}{999933}
1034 \definecolor{TolLightBrown}{HTML}{DDCC77}
1035 \definecolor{TolDarkRed}{HTML}{661100}
1036 \definecolor{TolLightRed}{HTML}{CC6677}
1037 \definecolor{TolLightPink}{HTML}{AA4466}
1038 \definecolor{TolDarkPink}{HTML}{882255}
1039 \definecolor{TolLightPurple}{HTML}{AA4499}
```

To use these colors, we describe “cycle lists” from which PGF chooses styles for the different series in a chart.

`mbarplot cycle` Colors and styles intended for bar charts with up to 12 series.

```
1040 \pgfplotscreateplotcyclelist{mbarplot cycle}{%
```

¹Tol actually describes several palettes; these colours are taken from the bottom row of Figure 3 in his technical note.

```

1041 {draw=TolDarkBlue, fill=TolDarkBlue!70},
1042 {draw=TolLightBrown, fill=TolLightBrown!70},
1043 {draw=TolLightGreen, fill=TolLightGreen!70},
1044 {draw=TolDarkPink, fill=TolDarkPink!70},
1045 {draw=TolDarkPurple, fill=TolDarkPurple!70},
1046 {draw=TolDarkRed, fill=TolDarkRed!70},
1047 {draw=TolDarkBrown, fill=TolDarkBrown!70},
1048 {draw=TolLightRed, fill=TolLightRed!70},
1049 {draw=TolLightPink, fill=TolLightPink!70},
1050 {draw=TolLightPurple, fill=TolLightPurple!70},
1051 {draw=TolLightBlue, fill=TolLightBlue!70},
1052 {draw=TolDarkGreen, fill=TolDarkGreen!70},
1053 }

```

`mlineplot cycle` Colors and styles intended for line charts with up to 4 series.

```

1054 \pgfplotscreateplotcyclelist{mlineplot cycle}{%
1055 {TolDarkBlue, mark=*, mark size=1.5pt},
1056 {TolLightBrown, mark=square*, mark size=1.3pt},
1057 {TolLightGreen, mark=triangle*, mark size=1.5pt},
1058 {TolDarkBrown, mark=diamond*, mark size=1.5pt},
1059 }

```

However, the above cycle lists are not applied automatically. We still need to define styles — `mlineplot` and `mbarplot` — that the user can apply to the axis of a `pgfplots` chart to use the colors. We'll also take the opportunity to adjust the display of chart axes when these styles are used.

```

1060 \pgfplotsset{
1061 compat=1.9,

```

`mlineplot` A style to apply to the axis of a PGF line plot.

```

1062 mlineplot/.style={
1063 mbaseplot,
1064 xmajorgrids=true,
1065 ymajorgrids=true,
1066 major grid style={dotted},
1067 axis x line=bottom,
1068 axis y line=left,
1069 legend style={

```

```

1070     cells={anchor=west},
1071     draw=none
1072 },
1073     cycle list name=mlineplot cycle,
1074 },

```

`mbarplot` A style to apply to the axis of a PGF bar chart. `mbarplot` uses vertical bars by default, while `horizontal mbarplot` has horizontal bars as the name implies. Their shared properties are factored out into the internal style `mbarplot base`.

```

1075 mbarplot base/.style={
1076     mbaseplot,
1077     bar width=6pt,
1078     axis y line*=none,
1079 },
1080 mbarplot/.style={
1081     mbarplot base,
1082     ybar,
1083     xmajorgrids=false,
1084     ymajorgrids=true,
1085     area legend,
1086     legend image code/.code={%
1087         \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
1088     },
1089     cycle list name=mbarplot cycle,
1090 },
1091 horizontal mbarplot/.style={
1092     mbarplot base,
1093     xmajorgrids=true,
1094     ymajorgrids=false,
1095     xbar stacked,
1096     area legend,
1097     legend image code/.code={%
1098         \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
1099     },
1100     cycle list name=mbarplot cycle,
1101 },

```

`mbaseplot` Adjusts the appearance of the axes in a PGF chart.

```
1102 mbaseplot/.style={
1103     legend style={
1104         draw=none,
1105         fill=none,
1106         cells={anchor=west},
1107     },
1108     x tick label style={
1109         font=\footnotesize
1110     },
1111     y tick label style={
1112         font=\footnotesize
1113     },
1114     legend style={
1115         font=\footnotesize
1116     },
1117     major grid style={
1118         dotted,
1119     },
1120     axis x line*=bottom,
1121 },
1122 disable thousands separator/.style={
1123     /pgf/number format/.cd,
1124     1000 sep={}
1125 },
1126 }
```
