1 Introduction

Beamer is an awesome way to make presentations with LaTeX, but its theme selection is surprisingly sparse. The stock themes share an aesthetic that can be a little cluttered, while the few distinctive custom themes available are often specialized for a particular corporate or institutional brand.

The goal of **NEO** is to provide a simple, modern Beamer theme suitable for anyone to use – it is based on the **metropolis** theme by **Matthias Vogelgesang** and **many other of contributors**. It tries to minimize noise and maximize space for content; the only visual flourish it offers is an (optional) progress bar added to each slide or to the section slides.

By default, **NEO** uses **Fira Sans**, a gorgeous typeface commissioned by Mozilla and designed by **Carrois**. For best results, you will need the Fira typeface installed and use $\text{X}_{\text{Y}}\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$ to typeset your slides. However, **NEO** can also be used with other typefaces and $\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$ build systems.

2 Getting Started

2.1 Installing from GitLab

If you want to use the cutting-edge development version of **NEO**, you can install it manually. Like any \LaTeX package, this involves four easy steps:

Download the source with a `git clone` of the [NEO repository](#) or as a [zip archive](#) of the latest development version.

Compile the style files by running `make sty` inside the downloaded directory. (Or run \LaTeX directly on `source/neotheme.ins`.)

Move the resulting `*.sty` files to the folder containing your presentation. To use **NEO** with many presentations, run `make install` or move the `*.sty` files to a folder in your \TeX path instead.

Use the theme for your presentation by declaring `\usetheme{neo}` in the preamble of your Beamer document.

NEO uses the Make build system to offer the following installation options for advanced users:

`make sty` builds the theme style files.

`make doc` builds this documentation manual.

`make demo` builds a demo presentation to test the features of **NEO**.

`make all` builds the theme and manual.

`make clean` removes the files generated by `make all`.

`make install` installs the theme into your local `texmf` folder.

`make uninstall` removes the theme from your local `texmf` folder.

2.2 A Minimal Example

The following code shows a minimal example of a Beamer presentation using **NEO**.

```
\documentclass{beamer}
```

```

\usetheme{neo}           % Use neo theme
\title{A minimal example}
\date{\today}
\author{Matthias Vogelgesang}
\institute{Centre for Modern Beamer Themes}
\begin{document}
  \maketitle
  \section{First Section}
  \begin{frame}{First Frame}
    Hello, world!
  \end{frame}
\end{document}

```

2.3 Dependencies

NEO depends on the beamer class and the following standard packages:

- tikz
- etoolbox
- ifxetex
- pgfopts
- calc
- ifluatex

For best results, we recommend installing the fonts **Fira Sans** and **Fira Mono** and compiling with **NEO** using Xe_{La}TeX or Lua_{La}TeX. These are optional dependencies; **NEO** is compatible with (e.g.) pdf_{La}TeX and will fall back to standard fonts if **Fira Sans** or **Fira Mono** is not installed.

The packaged name of **Fira Sans** is **Fira Sans OT** in some Linux distributions; this case is automatically handled by **NEO**.

2.4 Pandoc

To use this theme with **Pandoc**-based presentations, you can run the following command

```
$ pandoc -t beamer --latex-engine=xelatex -V theme:neo -o
  output.pdf input.md
```

3 Customization

3.1 Package options

The theme provides a number of options, which can be set using a key=value interface. The primary way to set options is to provide a comma-separated list of option-value pairs when loading **NEO** in the preamble:

```
\usetheme[option1=value1, option2=value2, ...]{neo}
```

Options can be changed at any time — even mid-presentation! — with the `\neoset` macro.

```
\neoset{option1=newvalue1, option2=newvalue2, ...}
```

The list of options is structured as shown in the following example.

option	key	<i>list of possible values</i>	default
		A short description of the option.	

3.1.1 Main theme

titleformat	<i>regular, smallcaps, allsmallcaps, allcaps</i>	regular
Changes the format of titles, subtitles, section titles, frame titles, and the text on “standout” frames. The available options produce Regular, SMALLCAPS, ALLSMALLCAPS, or ALLCAPS titles. Please refer to Section 6.1 for known issues with these options.		

titleformat plain	<i>regular, smallcaps, allsmallcaps, allcaps</i>	regular
Changes the format of “standout” frames (see titleformat, above).		

3.1.2 Inner theme

sectionpage	<i>none, simple, progressbar</i>	progressbar
Adds a slide at the start of each section (simple) with an optional thin progress bar below the section title (progressbar). The none option disables the section page.		
subsectionpage	<i>none, simple, progressbar</i>	none
Optionally adds a slide at the start of each subsection. If enabled with the simple or progressbar options, the style of the section page will be updated to match the style of the subsection page. Note that section slides and subsection slides can appear consecutively if both are enabled; you may want to use this option together with sectionpage=none depending on the section structure of your presentation.		

3.1.3 Outer theme

numbering	<i>none, counter, fraction</i>	counter
Controls whether the frame number at the bottom right of each slide is omitted (none), shown (counter) or displayed as a fraction of the total number of frames (fraction).		
progressbar	<i>none, head, frametitle, foot</i>	none
Optionally adds a progress bar to the top of each frame (head), the bottom of each frame (foot), or directly below each frame title (frametitle).		

3.1.4 Color theme

block	<i>transparent, fill</i>	transparent
Optionally adds a light grey background to block environments like theorem and example.		
background	<i>dark, light</i>	light
Provides the option to have a dark background and light foreground instead of the reverse.		

3.1.5 Font theme

<code>titleformat title</code>	<i>regular, smallcaps, allsmallcaps, allcaps</i> regular
<code>titleformat subtitle</code>	Individually controls the format of titles, subtitles, section titles, and frame titles (see <code>titleformat</code> , above).
<code>titleformat section</code>	
<code>titleformat frame</code>	

3.2 Color Customization

The included **NEO** color theme is used by default, but its colors can be easily changed to suit your tastes. All of the theme's styles are defined in terms of three beamer colors:

- `normal` text (dark fg, light bg)
- `alerted` text (colored fg, should be visible against dark or light)
- `example` text (colored fg, should be visible against dark or light)

An easy way to customize the theme is to redefine these colors using

```
\setbeamercolor{ ... }{ fg= ... , bg= ... }
```

in your preamble. For greater customization, you can redefine any of the other stock beamer colors. In addition to the stock colors the theme defines a number of **NEO** specific colors, which can also be redefined to your liking.

```
\setbeamercolor{progress bar}{ ... }  
\setbeamercolor{title separator}{ ... }  
\setbeamercolor{progress bar in head/foot}{ ... }  
\setbeamercolor{progress bar in section page}{ ... }
```

3.3 Font Customization

The default font for **NEO** is Fira. This can be easily changed using the standard font selection commands of the `fontspec` package. So if you prefer, for example, the **Ubuntu** font family, just add the following two commands after loading the **NEO** theme.

```
\setsansfont{Ubuntu}
\setmonofont{Ubuntu Mono}
```

If you are expecting to present in a large room or with an underpowered projector, you may want to change the font to a heavier weight of Fira to maximize readability.

```
\setsansfont[BoldFont={Fira Sans SemiBold}]{Fira Sans Book}
```

3.3.1 Old style figures

The regular fontspec mechanism for changing glyph appearance applies also to this theme. If you want to have old style figures in the text but regular lined figures for math, you could add the following to your preamble:

```
\usefonttheme{professionalfonts} % required for mathspec
\usepackage{mathspec}
\setsansfont[BoldFont={Fira Sans},
             Numbers={OldStyle}]{Fira Sans Light}
\setmathsfon(Digits)[Numbers={Lining, Proportional}]{Fira
  Sans Light}
```

3.4 Commands

3.4.1 Standout frames

The **NEO** inner theme offers a custom frame format with large, centered text and an inverted background — perfect for focusing attention on single sentence or image. To use it, add the key `standout` to the frame:

```
\begin{frame}[standout]
  Thank you!
\end{frame}
```

4 pgfplots integration

NEO comes with a set of pre-defined pgfplots styles and a color theme based on Paul Tol's color scheme.

4.1 Styles

Pass the following style keys to the axis environment to get the appropriate effect:

`mlineplot` Plot regular line charts with reduced axis frames, less intrusive legend and subdued grid.

`mbarplot` Plot vertical bar charts in a similar way as `mlineplot` but reduce grid usage.

`horizontal mbarplot` Plot horizontal bar charts.

`disable thousands separator` Helper style to remove thousands separator.

4.2 Paul Tol colors

A good presentation uses colors that are distinct from each other as much as possible as well as from black and white, can be discerned item under different lighting and display environments and by color-blind viewers, while matching well together.

In a [technical note](#) for SRON, Paul Tol proposed a palette of colors satisfying these constraints. The sub-package `pgfplots-themetol` defines palettes for pgfplots charts based on Tol's work.

5 Tips & Tricks

5.1 Backup Slides

Speakers will often include extra slides at the end of their presentation to refer to during audience questions. One easy way to do this is to include the `appendixnumberbeamer` package in your preamble and call `\appendix` before your backup slides.

NEO will automatically turn off slide numbering and progress bars for slides in the appendix.

6 Known Issues

6.1 Title formats

Be aware that not every font supports small caps, so the `smallcaps` or `allsmallcaps` options may not work if you use a font other than Fira Sans. In particular, the Computer Modern sans-serif typeface, which is used when **NEO** is compiled with pdf \TeX , does not have a small-caps variant.

The title format options `allsmallcaps` and `allcaps` are quite nice from an aesthetic point of view, but their use of `\MakeLowercase` and `\MakeUppercase` can cause unexpected problems. For example:

- Some commands, like `\`, do not work inside `\MakeLowercase` and `\MakeUppercase`. (See [#125](#))
- Only alphabetic characters are affected by `\MakeLowercase`, so numerals and punctuation remain at full height. This can spoil some of the aesthetic benefits of `allsmallcaps`. (See [#33](#))
- `\MakeLowercase` and `\MakeUppercase` apply to math mode and `\scshape` does not. This can easily introduce mathematical errors that are hard to catch.
- It is impossible to typeset symbols which are encoded as uppercase letters in a different font. In particular, `\mathbb` and `\mathcal` letters will be replaced by other math glyphs. (See [#153](#))

The `allsmallcaps` and `allcaps` options are safe to use if your titles contain only alphabetic characters and do not require the expansion of any macros.

6.2 Interactions with other color themes

NEO can be used along with any other Beamer color theme, such as `crane` or `seahorse`. If you wish to do this, it is usually best to include the **NEO** sub-packages individually so the **NEO** color theme is never loaded. This will prevent conflicts between the **NEO** color theme and your preferred theme.

For example, overriding the color theme as follows may not work as expected because `\usetheme{neo}` loads the **NEO** color theme, which defines a relationship between the `frametitle` background and the primary palette of the theme. Since `seahorse` assumes a different relationship between its palettes, the result is a grey, rather than periwinkle, `frametitle` background.

```
\usetheme{neo}  
\usecolortheme{seahorse}
```

The correct colors are chosen if the **NEO** outer, inner, and font themes are loaded separately:

```
\useoutertheme{neo}  
\useinnertheme{neo}  
\usefonttheme{neo}  
\usecolortheme{seahorse}    % or your preferred color theme
```

Please note that **NEO** may not use all the colors defined in your favourite Beamer color theme. In particular, **NEO** does not set a background color for the title; this will cause issues when using color themes like `whale` which set a white foreground for the title.

6.3 Notes on second screen

If you use the `[show notes on second screen]` option built in to Beamer and compile with \LaTeX , text on slides following the first section slide may be

rendered in white instead of the regular colour. This is due to a [bug](#) in Beamer or Xe_{La}TeX itself. You can work around it either by compiling with Lua_{TeX} or by adding the following code to your preamble to reset the text color on each slide.

```
\makeatletter
\def\beamer@framenotesbegin{% at beginning of slide
  \usebeamercolor[fg]{normal text}
  \gdef\beamer@noteitems{}%
  \gdef\beamer@notes{}%
}
\makeatother
```

6.4 Standout frames with labels

Because the standout frame option creates a group to restrict the colour change to a single slide, labels defined after calling standout will stay local to the group. In other words, the following may result in a “label undefined” error.

```
\begin{frame}[standout, label=conclusion]{Conclusion}
  Awesome slide
\end{frame}
```

To fix this problem, change the order of the keys in the frame.

```
\begin{frame}[label=conclusion, standout]{Conclusion}
  Awesome slide
\end{frame}
```

This error can be unwittingly triggered if you export your slides from Emacs Org mode, which automatically adds labels after frame options. Alex Branham [offers](#) the following solution for Org mode users, using `org-set-property`.

```
* Start of a frame
:PROPERTIES:
:BEAMER_opt: label=conclusion,standout
:END:
```

6.5 Standout frames with Pandoc

With Pandoc versions prior 1.17.2 it was not possible to create standout frames because Pandoc only supported a specific list of frame attributes thus ignoring additional attributes such as `{.standout}`.

7 License

NEO is licensed under a [Creative Commons Attribution-ShareAlike 4.0 International License](#). This means that if you change the theme and re-distribute it, you must retain the copyright notice header and license it under the same CC-BY-SA license. This does not affect any presentations that you create with the theme.

8 Implementation

8.1 **NEO** parent theme

The primary job of this package is to load the component sub-packages of the **NEO** theme and route the theme options accordingly. It also provides some custom commands and environments for the user.

8.1.1 Package dependencies

```
1 \RequirePackage{etoolbox}
2 \RequirePackage{pgfopts}
```

8.1.2 Options

Most options are passed off to the component sub-packages.

```
3 \pgfkeys{/neo/.cd,
4   .search also={
5     /neo/inner,
6     /neo/outer,
```

```

7    /neo/color,
8    /neo/font,
9  }
10 }

```

`titleformat plain` Controls the formatting of the text on standout “plain” frames.

```

11 \pgfkeys{
12   /neo/titleformat plain/.cd,
13   .is choice,
14   regular/.code={%
15     \let\neo@plaintitleformat\@empty%
16     \setbeamerfont{standout}{shape=\normalfont}%
17   },
18   smallcaps/.code={%
19     \let\neo@plaintitleformat\@empty%
20     \setbeamerfont{standout}{shape=\scshape}%
21   },
22   allsmallcaps/.code={%
23     \let\neo@plaintitleformat\MakeLowercase%
24     \setbeamerfont{standout}{shape=\scshape}%
25     \PackageWarning{beamerthemeneo}{%
26       Be aware that titleformat plain=allsmallcaps can lead to prob-
27       lems%
28     }
29   },
30   allcaps/.code={%
31     \let\neo@plaintitleformat\MakeUppercase%
32     \setbeamerfont{standout}{shape=\normalfont}%
33     \PackageWarning{beamerthemeneo}{%
34       Be aware that titleformat plain=allcaps can lead to prob-
35       lems%
36     }
37   },
38 }

```

`titleformat` Sets a standard format for titles, subtitles, section titles, frame titles, and the text on standout “plain” frames.

```

37 \pgfkeys{
38   /neo/titleformat/.code=\pgfkeysalso{

```

```

39     font/titleformat title=#1,
40     font/titleformat subtitle=#1,
41     font/titleformat section=#1,
42     font/titleformat frame=#1,
43     titleformat plain=#1,
44   }
45 }

```

Shortcut option names as aliases to the corresponding key=value options.

```

46 \pgfkeys{/neo/.cd,
47   noslidenumbers/.code=\pgfkeysalso{outer/numbering=none},
48   usetotalslideindicator/.code=\pgfkeysalso{outer/numbering=fraction},
49   nosectionslide/.code=\pgfkeysalso{inner/sectionpage=none},
50   darkcolors/.code=\pgfkeysalso{color/background=dark},
51   blockbg/.code=\pgfkeysalso{color/block=fill, inner/block=fill},
52   light/.code=\pgfkeysalso{font/style=light},
53   book/.code=\pgfkeysalso{font/style=book},
54   regular/.code=\pgfkeysalso{font/style=regular},
55 }

```

Set default values for options.

```

56 \newcommand{\neo@setdefaults}{
57   \pgfkeys{/neo/.cd,
58     titleformat plain=regular,
59   }
60 }

```

To avoid generating externalized figures of the progressbar we have to disable them with “tikzexternalenable” and “tikzexternaldisable”. However, if the “external” library is not loaded we would get undefined control sequence problems, hence we define them as no-ops if they are not defined yet.

```

61 \providecommand{\tikzexternalenable}{}
62 \providecommand{\tikzexternaldisable}{}

```

8.1.3 Component sub-packages

Having processed the options, we can now load the component sub-packages of the theme.

```
63 \useinnertheme{neo}  
64 \useoutertheme{neo}  
65 \usecolortheme{neo}  
66 \usefonttheme{neo}
```

The `tol` theme for `pgfplots` is only loaded if `pgfplots` is used.

```
67 \AtEndPreamble{%  
68   \@ifpackageloaded{pgfplots}{%  
69     \RequirePackage{pgfplotsthemetol}  
70   }{}  
71 }
```

8.1.4 Custom commands

The parent theme defines custom commands as their proper usage may depend on multiple sub-packages.

`\neoset` Allows the user to change options midway through a presentation.

```
72 \newcommand{\neoset}[1]{\pgfkeys{/neo/.cd,#1}}
```

`\plain` Creates a plain frame with dark background, suitable for displaying images or a few words. The format of the text can be set with the `titleformat plain` option.

```
73 \def\neo@plaintitleformat#1{#1}  
74 \newcommand{\plain}[2][]{%  
75   \PackageWarning{beamerthemeneo}{%  
76     The syntax ‘\plain’ may be deprecated in a future version of neo.  
77     Please use a frame with [standout] instead.  
78   }  
79   \begin{frame}[standout]{#1}  
80     \neo@plaintitleformat{#2}  
81   \end{frame}  
82 }
```

`\mreducelistspacing`

```
83 \newcommand{\mreducelistspacing}{\vspace{-\topsep}}
```

8.1.5 Process package options

```
84 \neo@setdefaults
85 \ProcessPgfOptions{/neo}
```

8.2 NEO inner theme

A beamer inner theme dictates the style of the frame elements traditionally set in the “body” of each slide. These include:

- title, part, and section pages;
- itemize, enumerate, and description environments;
- block environments including theorems and proofs;
- figures and tables; and
- footnotes and plain text.

8.2.1 Package dependencies

```
86 \RequirePackage{etoolbox}
87 \RequirePackage{keyval}
88 \RequirePackage{calc}
89 \RequirePackage{pgfopts}
90 \RequirePackage{tikz}
```

8.2.2 Options

`sectionpage` Optionally add a slide marking the beginning of each section.

```
91 \pgfkeys{
92   /neo/inner/sectionpage/.cd,
93   .is choice,
94   none/.code=\neo@disablesectionpage,
95   simple/.code={\neo@enablesectionpage
96                 \setbeamertemplate{section page}[simple]},
97   progressbar/.code={\neo@enablesectionpage
98                     \setbeamertemplate{section page}[progressbar]},
```

```
99 }
```

`subsectionpage` Optionally add a slide marking the beginning of each subsection.

```
100 \pgfkeys{
101   /neo/inner/subsectionpage/.cd,
102   .is choice,
103   none/.code=\neo@disablessubsectionpage,
104   simple/.code={\neo@enablessubsectionpage
105                 \setbeamertemplate{section page}[simple]},
106   progressbar/.code={\neo@enablessubsectionpage
107                     \setbeamertemplate{section page}[progressbar]},
108 }
```

`\neo@inner@setdefaults` Set default values for inner theme options.

```
109 \newcommand{\neo@inner@setdefaults}{
110   \pgfkeys{/neo/inner/.cd,
111     sectionpage=progressbar,
112     subsectionpage=none
113   }
114 }
```

8.2.3 Title page

`title page` Template for the title page. Each element is only typset if it is defined by the user. If `\subtitle` is empty, for example, it won't leave a blank space on the title slide.

```
115 \setbeamertemplate{title page}{
116   \begin{minipage}[b][0.95\paperheight]{\textwidth}
117     \vfill%
118     \ifx\inserttitle\@empty\else\usebeamertemplate*{title}\fi
119     \ifx\insertsubtitle\@empty\else\usebeamertemplate*{subtitle}\fi
120     \usebeamertemplate*{title separator}
```

Beamer's definition of `\insertauthor` is always nonempty, so we have to test another macro initialized by `\author{...}` to see if the user has defined an author. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```

121 \ifx\insertdate\@empty\else\usebeamertemplate*{date}\fi
122 \ifx\beamer@shortauthor\@empty\else\usebeamertemplate*{author}\fi
123 \ifx\insertinstitute\@empty\else\usebeamertemplate*{institute}\fi
124 \vfill
125 \begin{minipage}[b][0.25\paperheight][t]{\textwidth}
126 \ifx\inserttitlegraphic\@empty\else\usebeamertemplate*{title graphic}\fi
127 \end{minipage}
128 \end{minipage}
129 }

```

Normal people should use `\maketitle` or `\titlepage` instead of using the `title page` beamer template directly. Beamer already defines these macros, but we patch them here to make the title page [plain] by default, remove `\@thanks`, and ensure the title frame number doesn't count. In addition, `\maketitle` used outside of a frame will load a predefined background image, which can be changed using the optional argument: `\maketitle{extern}` for `images/titlepage-extern.pdf`

`\maketitle` Inserts the title frame, or causes the current frame to use the `title page`
`\titlepage` template.

```

130 \renewcommand{\maketitle}[1][extern]{%
131 \ifbeamer@inframe
132 \titlepage
133 \else
134 {
135 \usebackgroundtemplate{\includegraphics[width=\paperwidth]{images/titlepage-
#1}}
136 \frame[plain,noframenumbering]{
137 \neo@colors@dark
138 \setbeamercolor{title separator}{
139 fg=black!20,
140 bg=normal text.fg
141 }
142 \titlepage
143 }
144 }
145 \fi
146 }
147 \def\titlepage{%

```

```

148 \usebeamertemplate{title page}
149 }

```

255 }

```

progress bar in section page Template for the progress bar displayed by default on the section page. This code is duplicated in large part in the outer theme's template progress bar in head-/foot.

```

256 \newlength{\neo@progressonsectionpage}
257 \newlength{\neo@progressonsectionpage@linewidth}
258 \setlength{\neo@progressonsectionpage@linewidth}{0.4pt}
259 \setbeamertemplate{progress bar in section page}{
260   \setlength{\neo@progressonsectionpage}{%
261     \textwidth * \ratio{\insertframenum pt}{\inserttotalframenum pt}}%
262   }%
263   \tikzexternaldisable%
264   \begin{tikzpicture}
265     \fill[bg] (0,0) rectangle (\textwidth, \neo@progressonsectionpage@linewidth);
266     \fill[fg] (0,0) rectangle (\neo@progressonsectionpage, \neo@progressonsectionpage@linewidth);
267   \end{tikzpicture}%
268   \tikzexternalenable%
269 }

```

The above code assumes that `\insertframenum` is less than or equal to `\inserttotalframenum`. However, this is not true on the first com-

pile; in the absence of an `.aux` file, `\inserttotalframenum` defaults to 1. This behaviour could cause fatal errors for long presentations, as `\neo@progressonsectionpage` would exceed TeX's maximum length (16383.99999pt, roughly 5.75 metres or 18.9 feet). To avoid this, we increase the default value for `\inserttotalframenum`; presentations with over 4000 slides will still break on first compile, but users in that situation likely have deeper problems to solve.

```
270 \def\inserttotalframenum{100}
```

8.2.5 Block environments

`block` The three different block environments differ only in their colours. Rather
`block alerted` than repeat the essentially the same template three times, we use the auxil-
`block example` iary macro `\neo@block` to define all three templates.

```
271 \newlength{\neo@blocksep}
272 \newlength{\neo@blockadjust}
273 \setlength{\neo@blocksep}{0.75ex}
274 \setlength{\neo@blockadjust}{0.25ex}
275 \providecommand{\neo@strut}{%
276   \vphantom{ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz}}%
277 }
278 \newcommand{\neo@block}[1]{
279   \par\vskip\medskipamount%
280   \setlength{\parskip}{0pt}
```

If a background color is defined for the block title or body, we need to add a little bit of padding to the corresponding box. Ideally, this would be accomplished by setting `colsep=0.75ex`, which is intended to add “color separation space” only when the box has a colored background. Unfortunately, `colsep` also adds this separation if the background color is inherited, even if the inherited color is actually empty. (The technical reason for this boils down to the fact that the `\ifx` directive does not expand macros.)

To achieve the correct spacing for `alertblocks` and `exampleblocks` as well as for normal blocks, we have to begin the `beamercolorbox` differently based on whether `block title` has an empty background.

If the block title background is empty, or the user has explicitly removed the background from (e.g.) block title alerted, we just need to set a right-skip for a nice ragged-right block title.

```

281 \ifbeamercoloreempty[bg]{block title#1}{%
282   \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}}{%
283   \ifbeamercoloreempty[bg]{block title}{%
284     \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}%
285   }%
286 %   \end{macrocode}
287 %
288 %   Otherwise, if the |block title| has a background, we set the padding based
289 %   on |\neo@blockskip|. However, we have to visually compensate for
290 %   the |\neo@strut| added to the block title (see below) by
291 %   subtracting |\neo@blockadjust| from the top and bottom padding.
292 %
293 %   \begin{macrocode}
294 {%
295   \begin{beamercolorbox}[
296     sep=\dimexpr\neo@blocksep-\neo@blockadjust\relax,
297     leftskip=\neo@blockadjust,
298     rightskip=\dimexpr\neo@blockadjust plus 4em\relax
299   ]{block title#1}%
300 }}%
301 %   \end{macrocode}
302 %
303 %   We can now set the contents of the |block title|. The zero-width but
304 %   positive-height box |\neo@strut| ensures that the block title box
305 %   has a consistent height, even if it lacks punctuation, ascen-
306 %   ders, or
307 %   descenders.
308 %   \begin{macrocode}
309     \usebeamerfont*{block title#1}%
310     \neo@strut%
311     \insertblocktitle%
312     \neo@strut%
313 \end{beamercolorbox}%
314 %   \end{macrocode}
315 %

```

```

316%   Next, we typeset the |block body|. This the code is similar to, but simpler
317%   than, the |block title| code since we don't need to adjust for any struts.
318%
319%   \begin{macrocode}
320   \nointerlineskip%
321   \ifbeamercolorempy[bg]{block body#1}{%
322     \begin{beamercolorbox}[vmode]{block body#1}{%
323       \ifbeamercolorempy[bg]{block body}{%
324         \begin{beamercolorbox}[vmode]{block body#1}%
325       }{%
326         \begin{beamercolorbox}[sep=\neo@blocksep, vmode]{block body#1}%
327         \vspace{-\neo@parskip}
328       }%
329       \usebeamerfont{block body#1}%
330       \setlength{\parskip}{\neo@parskip}%
331 }

```

This concludes the auxiliary macro `\neo@block`. Finally, we define the block beamer templates using this macro.

```

332 \setbeamertemplate{block begin}{\neo@block{}}
333 \setbeamertemplate{block alerted begin}{\neo@block{ alerted}}
334 \setbeamertemplate{block example begin}{\neo@block{ example}}
335 \setbeamertemplate{block end}{\end{beamercolorbox}\vspace*{0.2ex}}
336 \setbeamertemplate{block alerted end}{\end{beamercolorbox}\vspace*{0.2ex}}
337 \setbeamertemplate{block example end}{\end{beamercolorbox}\vspace*{0.2ex}}

```

8.2.6 Lists and floats

```

338 \setbeamertemplate{itemize items}{\textbullet}
339 \setbeamertemplate{caption label separator}{: }
340 \setbeamertemplate{caption}[numbered]

```

8.2.7 Footnotes

```

341 \setbeamertemplate{footnote}{%
342   \parindent 0em\noindent%
343   \raggedright
344   \usebeamercolor{footnote}\hbox to 0.8em{\hfil\insertfootnotemark}\insertfootnotetext
345 }

```

8.2.8 Text and spacing settings

```
346 \newlength{\neo@parskip}
347 \setlength{\neo@parskip}{0.5em}
348 \setlength{\parskip}{\neo@parskip}
349 \linespread{1.15}
```

By default, Beamer frames offer the `c` option to *almost* vertically center the text, but the placement is a little too high. To fix this, we redefine the `c` option to equalize `\beamer@frametopskip` and `\beamer@framebottomskip`. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```
350 \define@key{beamerframe}{c}[true]{% centered
351   \beamer@frametopskip=0pt plus 1fill\relax%
352   \beamer@framebottomskip=0pt plus 1fill\relax%
353   \beamer@frametopskipautobreak=0pt plus .4\paperheight\relax%
354   \beamer@framebottomskipautobreak=0pt plus .6\paperheight\relax%
355   \def\beamer@initfirstlineunskip{}%
356 }
```

8.2.9 Standout frames

NEO offers a custom frame format with large, centered text and an inverted background. To use it, add the key `standout` to the frame: `\begin{frame}[standout] ... \end{frame}`

`standout` Optional arguments to Beamer's frames are implemented using `\define@key` from the `keyval` package, which will execute code when the defined option is called. For the `standout` option, we begin a group, change the colors and fonts, and set a alignment.

```
357 \providebool{neo@standout}
358 \define@key{beamerframe}{standout}[true]{%
359   \booltrue{neo@standout}
360   \begingroup
361     \setkeys{beamerframe}{c}
362     \setkeys{beamerframe}{noframenumbers}
363     \ifbeamercoloreempty{bg}{palette primary}{
364       \setbeamercolor{background canvas}{
365         use=palette primary,
366         bg=-palette primary.fg
```

```

367     }
368   }{
369     \setbeamercolor{background canvas}{
370       use=palette primary,
371       bg=palette primary.bg
372     }
373   }
374   \setbeamercolor{local structure}{
375     fg=palette primary.fg
376   }
377   \centering
378   \usebeamercolor[fg]{palette primary}
379   \usebeamerfont{standout}
380 }

```

Then we just have to close the group after the standout slide is finished in order to restore the colours and fonts for the rest of the presentation.

Unfortunately, we cannot use or this (see <http://tex.stackexchange.com/questions/226319/>). Instead, we add the `\endgroup` to `\beamer@reseteecodes`, which is run exactly once at the end of each slide.

```

381 \apptocmd{\beamer@reseteecodes}{%
382   \ifbool{neo@standout}{
383     \endgroup
384     \boolfalse{neo@standout}
385   }}
386 {}{}{}

```

8.2.10 Process package options

```

387 \neo@inner@setdefaults
388 \ProcessPgfPackageOptions{/neo/inner}

```

8.3 NEO outer theme

A beamer outer theme dictates the style of the frame elements traditionally set outside the body of each slide: the head, footline, and frame title.

8.3.1 Package dependencies

```
389 \RequirePackage{etoolbox}
390 \RequirePackage{calc}
391 \RequirePackage{pgfopts}
```

8.3.2 Options

`icon` Adds an icon to the frametitle on each slide.

```
392 \pgfkeys{
393   /neo/outer/frametitle icon/.cd,
394   .is choice,
395   none/.code=\setbeamertemplate{frametitle icon}[none],
396   i4/.code=\setbeamertemplate{frametitle icon}[i4],
397   fau/.code=\setbeamertemplate{frametitle icon}[fau],
398 }
```

`numbering` Adds slide numbers to the bottom right of each slide.

```
399 \pgfkeys{
400   /neo/outer/numbering/.cd,
401   .is choice,
402   none/.code=\setbeamertemplate{frame numbering}[none],
403   counter/.code=\setbeamertemplate{frame numbering}[counter],
404   fraction/.code=\setbeamertemplate{frame numbering}[fraction],
405 }
```

`progressbar` Adds a progress bar to the top, bottom, or frametitle of each slide.

```
406 \pgfkeys{
407   /neo/outer/progressbar/.cd,
408   .is choice,
409   none/.code={%
410     \setbeamertemplate{headline}[plain]
411     \setbeamertemplate{frametitle}[plain]
412     \setbeamertemplate{footline}[plain]
413   },
414   head/.code={\pgfkeys{/neo/outer/progressbar=none}
415     \addtobeamertemplate{headline}{}{%
416       \usebeamertemplate*{progress bar in head/foot}
417     }
418 }
```

```

418     },
419     frametitle/.code={\pgfkeys{/neo/outer/progressbar=none}
420       \addtobeamertemplate{frametitle}{}{}%
421       \usebeamertemplate*{progress bar in head/foot}
422     },
423     foot/.code={\pgfkeys{/neo/outer/progressbar=none}
424       \addtobeamertemplate{footline}{}{}%
425       \usebeamertemplate*{progress bar in head/foot}%
426     },
427   },
428 },
429 }

```

`\neo@outer@setdefaults` Sets default values for outer theme options.

```

430 \newcommand{\neo@outer@setdefaults}{
431   \pgfkeys{/neo/outer/.cd,
432     frametitle icon=none,
433     numbering=counter,
434     progressbar=frametitle,
435   }
436 }

```

8.3.3 Head and footline

All good beamer presentations should already remove the navigation symbols, but **NEO** removes them automatically (just in case).

```

437 \setbeamertemplate{navigation symbols}{}

```

`frametitle icon` Templates for the icon on the right of the frame title.

```

438 \defbeamertemplate{frametitle icon}{none}{}
439 \defbeamertemplate{frametitle icon}{i4}{\hfill\raisebox{-.25\height}{\includegraphics[width=1cm]{i4-white}}}
440 \defbeamertemplate{frametitle icon}{fau}{\hfill\raisebox{-.25\height}{\includegraphics[width=1cm]{fau-white}}}

```

`frame numbering` Templates for the frame number. Can be omitted, shown or displayed as a fraction of the total frames.

```

441 \defbeamertemplate{frame footer}{none}{}
442 \defbeamertemplate{frame footer}{custom}[1]{ #1 }

443 \defbeamertemplate{frame numbering}{none}{}
444 \defbeamertemplate{frame numbering}{counter}{\insertframenumbers}
445 \defbeamertemplate{frame numbering}{fraction}{
446   \insertframenumbers/\inserttotalframenumbers
447 }

```

headline Templates for the head- and footline at the top and bottom of each frame.

footline

```

448 \defbeamertemplate{headline}{plain}{}
449 \defbeamertemplate{footline}{plain}{%
450   \begin{beamercolorbox}[wd=\textwidth, sep=3ex]{footline}%
451     \usebeamerfont{page number in head/foot}%
452     \usebeamertemplate*{frame footer}
453     \hfill%
454     \usebeamertemplate*{frame numbering}
455   \end{beamercolorbox}%
456 }

```

8.3.4 Frametitle

frametitle Templates for the frame title, which is optionally underlined with a progress bar.

```

457 \newlength{\neo@frametitle@padding}
458 \setlength{\neo@frametitle@padding}{2.2ex}
459 \newcommand{\neo@frametitlestrut@start}{
460   \rule{0pt}{\neo@frametitle@padding +%
461     \totalheightof{%
462       \ifcsdef{neo@frametitleformat}{\neo@frametitleformat X}{X}%
463     }%
464   }%
465 }
466 \newcommand{\neo@frametitlestrut@end}{
467   \rule[-\neo@frametitle@padding]{0pt}{\neo@frametitle@padding}
468 }
469 \defbeamertemplate{frametitle}{plain}{%
470   \nointerlineskip%

```

```

471 \begin{beamercolorbox}[%
472     wd=\paperwidth,%
473     sep=0pt,%
474     leftskip=\neo@frametitle@padding,%
475     rightskip=\neo@frametitle@padding,%
476     ]{frametitle}%
477 \neo@frametitlestrut@start%
478 \insertframetitle%
479 \usebeamertemplate*{frametitle icon}%
480 \nolinebreak%
481 \neo@frametitlestrut@end%
482 \end{beamercolorbox}%
483 }
484 \setbeamertemplate{frametitle continuation}{%
485     \usebeamerfont{frametitle}
486     \romannumeral \insertcontinuationcount
487 }

```

progress bar in head/foot Template for the progress bar optionally displayed below the frame title on each page. Much of this code is duplicated in the inner theme's template progress bar in section page.

```

488 \newlength{\neo@progressinheadfoot}
489 \newlength{\neo@progressinheadfoot@linewidth}
490 \setlength{\neo@progressinheadfoot@linewidth}{0.8pt}
491 \setbeamertemplate{progress bar in head/foot}{
492     \nointerlineskip
493     \setlength{\neo@progressinheadfoot}{%
494         \paperwidth * \ratio{\insertframenum pt}{\inserttotalframenum pt}}%
495     }%
496 \begin{beamercolorbox}[wd=\paperwidth]{progress bar in head/foot}
497     \tikzexternaldisable%
498     \begin{tikzpicture}
499         \fill[bg] (0,0) rectangle (\paperwidth, \neo@progressinheadfoot@linewidth);
500         \fill[fg] (0,0) rectangle (\neo@progressinheadfoot, \neo@progressinheadfoot@linewidth);
501     \end{tikzpicture}%
502     \tikzexternalenable%
503 \end{beamercolorbox}
504 }

```

`appendix` Removes page numbering and per-slide progress bars when `\appendix` is called. This makes it easier to include additional “backup slides” at the end of the presentation, especially in conjunction with the package `appendixnumberbeamer`.

```

505 \AtBeginDocument{%
506   \apptocmd{\appendix}{%
507     \pgfkeys{%
508       /neo/outer/.cd,
509       numbering=none,
510       progressbar=none}
511   }{}{}
512 }
```

8.3.5 Process package options

```

513 \neo@outer@setdefaults
514 \ProcessPgfPackageOptions{/neo/outer}
```

8.4 NEO font theme

A beamer font theme sets the style of the font used in the document.

8.4.1 Package dependencies

```

515 \RequirePackage{etoolbox}
516 \RequirePackage{ifxetex}
517 \RequirePackage{ifluatex}
518 \RequirePackage{pgfopts}
```

8.4.2 Load Fira fonts

If the presentation is compiled with Xe_{La}TeX or Lua_{La}TeX, the `fontspec` package is loaded and we search for the Fira fonts.

```

519 \ifboolexpr{bool {xetex} or bool {luatex}}{
520   \@ifpackageloaded{fontspec}{
521     \PassOptionsToPackage{no-math}{fontspec}
522   }{
523     \RequirePackage[no-math]{fontspec}
524   }
```

```

525 \IfFileExists{FiraSans.sty}{
526   \RequirePackage[T1]{fontenc}
527   \RequirePackage[sfdefault]{FiraSans}
528   \RequirePackage[nomap,lining]{FiraMono}
529   \defaultfontfeatures{
530     Scale      = 1.0,
531     Extension = .otf
532   }
533 }{
534   \IfFileExists{./fonts/FiraSans-Regular.otf}{
535     \defaultfontfeatures{
536       Path = ./fonts/,
537       Scale      = 1.0,
538       Extension = .otf

```

8.5.4 Base styles

All colors in **NEO** are derived from the definitions of `normal text`, `alerted text`, and `example text`.

```
919 \newcommand{\neo@colors@dark}{
920   \setbeamercolor{normal text}{%
921     fg=black!2,
922     bg=nBlack
923   }
924   \usebeamercolor[fg]{normal text}
925 }
926 \newcommand{\neo@colors@light}{
927   \setbeamercolor{normal text}{%
928     fg=nBlack,
929     bg=black!2
930   }
931 }
932 \setbeamercolor{alerted text}{%
933   fg=nDarkRed
934 }
935 \setbeamercolor{example text}{%
936   fg=nDarkYellow
937 }
```

8.5.5 Derived colors

The titles and structural elements (e.g. itemize bullets) are set in the same color as `normal text`. This would ideally be done by setting `normal text` as a parent style, which we do to set `titlelike`, but this doesn't work for `structure` as its foreground is set explicitly in `beamercolorthemedefault.sty`.

```
938 \setbeamercolor{titlelike}{use=normal text, parent=normal text}
939 \setbeamercolor{author}{use=normal text, parent=normal text}
940 \setbeamercolor{date}{use=normal text, parent=normal text}
941 \setbeamercolor{institute}{use=normal text, parent=normal text}
942 \setbeamercolor{structure}{use=normal text, fg=normal text.fg}
```

The “primary” palette should be used for the most important navigational ele-

ments, and possibly of other elements. **NEO** uses it for frame titles and slides.

```
943 \setbeamercolor{palette primary}{%
944   use=normal text,
945   fg=normal text.bg,
946   bg=nDarkBlue
947 }
948 \setbeamercolor{frametitle}{%
949   use=palette primary,
950   parent=palette primary
951 }
```

The **NEO** inner or outer themes optionally display progress bars in various locations. Their color is set by `progress bar` but the two different kinds can be customized separately. The horizontal rule on the title page is also set based on the progress bar color and can be customized with `title separator`.

```
952 \setbeamercolor{progress bar}{%
953   use=normal text,
954   fg=nDarkBlue,
955   bg=nLightBlue
956 }
957 \setbeamercolor{title separator}{
958   use=progress bar,
959   parent=progress bar
960 }
961 \setbeamercolor{progress bar in head/foot}{%
962   use=normal text.fg,
963   fg=nBlack,
964   parent=progress bar
965 }
966 \setbeamercolor{progress bar in section page}{
967   use=progress bar,
968   parent=progress bar
969 }
```

Block environments such as `theorem` and `example` have no background color by default. The option `block=fill` sets a background color based on the background and foreground of `normal text`. The option `block=transparent` reverts the block environments to an empty background, which can be useful if

changing colors mid-presentation.

```
970 \newcommand{\neo@block@transparent}{%
971   \setbeamercolor{block title}{%
972     use=normal text,
973     fg=nDarkBlue,
974     bg=
975   }
976   \setbeamercolor{block title alerted}{%

1029

```

Footnotes

```

1030 \setbeamercolor{footnote}{fg=normal text.fg!90}
1031 \setbeamercolor{footnote mark}{fg=.}

```

We also reset the bibliography colors in order to pick up the surrounding colors at the time of use. This prevents us having to set the correct color in normal and standout mode.

```

1032 \setbeamercolor{bibliography entry author}{fg=, bg=}
1033 \setbeamercolor{bibliography entry title}{fg=, bg=}
1034 \setbeamercolor{bibliography entry location}{fg=, bg=}
1035 \setbeamercolor{bibliography entry note}{fg=, bg=}

```

8.5.6 Process package options

```

1036 \neo@color@setdefaults
1037 \ProcessPgfPackageOptions{/neo/color}

```

```
1038 \mode<all>
```

8.6 Tol pgfplots theme

Paul Tol's 12-color palette¹ is as follows:

```
1039 \definecolor{TolDarkPurple}{HTML}{332288}
1040 \definecolor{TolDarkBlue}{HTML}{6699CC}
1041 \definecolor{TolLightBlue}{HTML}{88CCEE}
1042 \definecolor{TolLightGreen}{HTML}{44AA99}
1043 \definecolor{TolDarkGreen}{HTML}{117733}
1044 \definecolor{TolDarkBrown}{HTML}{999933}
1045 \definecolor{TolLightBrown}{HTML}{DDCC77}
1046 \definecolor{TolDarkRed}{HTML}{661100}
1047 \definecolor{TolLightRed}{HTML}{CC6677}
1048 \definecolor{TolLightPink}{HTML}{AA4466}
1049 \definecolor{TolDarkPink}{HTML}{882255}
1050 \definecolor{TolLightPurple}{HTML}{AA4499}
```

To use these colors, we describe “cycle lists” from which PGF chooses styles for the different series in a chart.

`mbarplot cycle` Colors and styles intended for bar charts with up to 12 series.

```
1051 \pgfplotscreateplotcyclelist{mbarplot cycle}{%
1052   {draw=TolDarkBlue,    fill=TolDarkBlue!70},
1053   {draw=TolLightBrown,  fill=TolLightBrown!70},
1054   {draw=TolLightGreen,  fill=TolLightGreen!70},
1055   {draw=TolDarkPink,    fill=TolDarkPink!70},
1056   {draw=TolDarkPurple,  fill=TolDarkPurple!70},
1057   {draw=TolDarkRed,     fill=TolDarkRed!70},
1058   {draw=TolDarkBrown,   fill=TolDarkBrown!70},
1059   {draw=TolLightRed,    fill=TolLightRed!70},
1060   {draw=TolLightPink,   fill=TolLightPink!70},
1061   {draw=TolLightPurple, fill=TolLightPurple!70},
1062   {draw=TolLightBlue,   fill=TolLightBlue!70},
1063   {draw=TolDarkGreen,   fill=TolDarkGreen!70},
1064 }
```

¹Tol actually describes several palettes; these colours are taken from the bottom row of Figure 3 in his technical note.

`mlineplot cycle` Colors and styles intended for line charts with up to 4 series.

```
1065 \pgfplotscreateplotcyclelist{mlineplot cycle}{%
1066   {TolDarkBlue, mark=*, mark size=1.5pt},
1067   {TolLightBrown, mark=square*, mark size=1.3pt},
1068   {TolLightGreen, mark=triangle*, mark size=1.5pt},
1069   {TolDarkBrown, mark=diamond*, mark size=1.5pt},
1070 }
```

However, the above cycle lists are not applied automatically. We still need to define styles — `mlineplot` and `mbarplot` — that the user can apply to the axis of a `pgfplots` chart to use the colors. We'll also take the opportunity to adjust the display of chart axes when these styles are used.

```
1071 \pgfplotsset{
1072   compat=1.9,
```

`mlineplot` A style to apply to the axis of a PGF line plot.

```
1073   mlineplot/.style={
1074     mbaseplot,
1075     xmajorgrids=true,
1076     ymajorgrids=true,
1077     major grid style={dotted},
1078     axis x line=bottom,
1079     axis y line=left,
1080     legend style={
1081       cells={anchor=west},
1082       draw=none
1083     },
1084     cycle list name=mlineplot cycle,
1085   },
```

`mbarplot` A style to apply to the axis of a PGF bar chart. `mbarplot` uses vertical bars by default, while `horizontal mbarplot` has horizontal bars as the name implies. Their shared properties are factored out into the internal style `mbarplot base`.

```
1086   mbarplot base/.style={
1087     mbaseplot,
1088     bar width=6pt,
```

```

1089     axis y line*=none,
1090 },
1091 mbarplot/.style={
1092     mbarplot base,
1093     ybar,
1094     xmajorgrids=false,
1095     ymajorgrids=true,
1096     area legend,
1097     legend image code/.code={%
1098         \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
1099     },
1100     cycle list name=mbarplot cycle,
1101 },
1102 horizontal mbarplot/.style={
1103     mbarplot base,
1104     xmajorgrids=true,
1105     ymajorgrids=false,
1106     xbar stacked,
1107     area legend,
1108     legend image code/.code={%
1109         \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
1110     },
1111     cycle list name=mbarplot cycle,
1112 },

```

mbaseplot Adjusts the appearance of the axes in a PGF chart.

```

1113 mbaseplot/.style={
1114     legend style={
1115         draw=none,
1116         fill=none,
1117         cells={anchor=west},
1118     },
1119     x tick label style={
1120         font=\footnotesize
1121     },
1122     y tick label style={
1123         font=\footnotesize
1124     },
1125     legend style={

```

```

1126     font=\footnotesize
1127 },
1128     major grid style={
1129         dotted,
1130     },
1131     axis x line*=bottom,
1132 },
1133     disable thousands separator/.style={
1134         /pgf/number format/.cd,
1135         1000 sep={}
1136     },
1137 }

```
